

HUXWRX Approved Adapters & Mounts List

The majority of suppressor failures are caused by improper mounting on the firearm. With the constantly growing number of adapter and mount designs in the market, HUXWRX will only warranty suppressors that are used with:

- HUXWRX muzzle devices, mounts, adapters, and accessories.
Note: The term “QD” (Quick Detach) is used widely across the suppressor industry to describe multiple designs. HUXWRX FLOW suppressors feature left handed threads as part of the patented HUXWRX TORQUE LOCK® system and may not work with mounts described as “QD” from other manufacturers.
- Tri Lug/3 Lug devices (including HK).
- Other approved accessories¹:

If applicable, ensure you get the caliber and thread needed for your firearm. There is a constantly growing number of adapters on the market. HUXWRX cannot control the quality of barrel threads/tapers or other suppressor accessory manufacturers. It is strongly recommended to check your suppressor alignment using an alignment rod in your firearm's specific caliber each time you mount your suppressor, especially when using new accessories.

When in doubt, only use your HUXWRX suppressor with product on this list or double check with the HUXWRX Customer Service team: support@huxwrx.com Toll-free: (801) 542-0425

1. With exceptions noted below, external seat HUB adapters should work with HUXWRX VENTUM series suppressors. Specific accessories that are **NOT COMPATIBLE** with HUXWRX products or will void the HUXWRX warranty are:

- **CGS HELIOS TAPER MOUNT** (not compatible with the VENTUM series).
- **Griffin Armament CAM-LOK Barrel Adapter** (use will void HUXWRX warranty due to chances of misalignment).
